Achraf Berrihi

AI Data Operations Lead | AI & Intelligent Systems Engineer

Casablanca, Morocco | Open to Remote & Relocation | achraf-berrihi@hotmail.com
linkedin.com/in/achraf-berrihi | github.com/achrafberrihi | achrafberrihi.github.io

PROFESSIONAL SUMMARY

Final-year State Engineering student in Electrical Engineering & Intelligent Systems with a hybrid profile across AI data operations, LLM evaluation and benchmarking, agentic automation and Edge AI. Leads human-in-the-loop (HITL) data workflows, evaluates LLM behavior, curates multimodal datasets and builds automation pipelines for projects involving Scale AI, Snorkel AI, Innodata, Microsoft, Uber AI and micro1. Brings a solid industrial foundation in automation, SCADA supervision, electrical machines, power systems, smart grids and renewable energy, strengthened by an engineering internship at OCP Group.

EDUCATION

State Engineer Degree, Electrical Engineering & Intelligent Systems | **EMSI** Sep 2024 – Present (expected 2027)

Final year: Smart Grids, Renewable Energy, SCADA Supervision, Lean Management, Project Management, Production Management.

Coursework: Machine Learning and Deep Learning, Electrical Installation Design, Power Electronics, Variable-Speed Drives, Industrial Local Area Networks, Industrial Control and State-Space Representation, Smart Sensors and Actuators, Industrial Robotics, Industry of the Future (3DEXPERIENCE innovation project), Production and Maintenance Management, Industrial Supervision and Digital Twin, Electrical Networks and Electrical Safety, Project Management and Entrepreneurship.

Bachelor's Degree, Data & AI Engineering | **ENSEM Casablanca** Oct 2022 – Dec 2023

Specialized Technician Diploma, Electromechanical Engineering | **ISIC** 2017 – 2019

PROFESSIONAL EXPERIENCE

AI Data Operations Team Lead | **Agents Only Technologies** Aug 2026 – Present

- Lead AI data operations and annotation workflows, setting quality benchmarks and operational standards for large-scale model training.
- Coordinate complex review cycles and translate technical guidance into production-ready French workflows.

AI Chatbot Tester | **Productive Playhouse** Jul 2026 – Present

- Test conversational AI for safety, instruction adherence, conversational flow and edge cases, documenting failure patterns in structured evaluations that guide model-quality improvements.

Electrical Engineering Intern (PFA) | **OCP Group, Jorf Lasfar** Jul 2026 – Aug 2026

- Studied the electrical system of a 25 MVA steam turbo-alternator (5.5/22 kV step-up transformer, about 2,624 A nominal current), covering stator and rotor design, brushless excitation, automatic voltage regulation (AVR) and grid synchronization.
- Analyzed the generator protection scheme (87G differential, 59/27 over- and under-voltage, 12 overspeed, 40 loss of excitation) and proposed a machine-learning predictive maintenance approach based on sensor, IED and vibration data.

AI/LLM Speech Analyst | **Innodata Inc.** May 2026 – Present

- Analyze speech and audio datasets and evaluate speech-to-text output, flagging transcription and acoustic-quality issues to raise the quality of ASR and LLM data pipelines.

AI Vendor Consultant | **DatoviaPlayHouse / Independent Partner** May 2026 – Present

- Deliver HITL quality review, audio transcription, localization and automated pipeline validation, and coordinate dataset QA across multilingual AI-data workflows.

AI Benchmarking Engineer | **Snorkel AI** May 2026 – Present

- Benchmark enterprise LLM behavior through programmatic labeling and structured evaluation loops, designing repeatable datasets and scoring workflows to compare model performance.

AI Automation Developer | **King Caller AI** Dec 2025 – Present

- Design LLM-driven business automations that orchestrate multi-step API integrations, combining agentic reasoning, tool execution and structured outputs to make processes more reliable.

AI Ambassador | **AI 2030** Sep 2025 – Present

- Promote responsible AI practices, ethical frameworks, safety protocols and model-alignment principles across AI-focused initiatives.

LLM Evaluator | **Pareto.AI** Sep 2025 – Present

- Evaluate model outputs for factual correctness, safety, instruction following and alignment, surfacing systematic failure modes through structured human evaluation.

Data & AI Specialist | **Uber AI Solutions** Aug 2025 – Present

- Process and review high-throughput AI data workflows for predictive-model development, applying precision-focused quality controls to scale-critical datasets.

Creative AI Data Trainer | **SuperAnnotate** Jul 2025 – Present

- Curate complex multimodal and generative-AI datasets, applying annotation standards and quality checks that improve training-data fidelity and consistency.

AI Transcription Reviewer | **OpenTrain AI** Jul 2025 – Present

- Audit speech datasets and transcriptions for accuracy, consistency and linguistic quality, and identify recurring ASR errors to drive continuous dataset improvement.

Data & Prompt Engineer | **micro1** Apr 2025 – Present

- Engineer optimized prompt structures, enrich evaluation datasets and run iterative quality-control cycles for AI model assessment and client deployments.

Embedded Systems AI Software Engineer | **Lillup, San Francisco, CA** Feb 2025 – Sep 2025

- Developed low-latency embedded AI applications and edge-inference pipelines for IoT hardware, optimizing on-device workflows for resource-constrained environments.

Data Annotator | **Microsoft** Aug 2024 – Oct 2024

- Curated and annotated production AI data with high precision within enterprise quality frameworks, applying detailed labeling guidelines consistently.

Data & AI Engineer | **Volga Partners / Scale AI** Jun 2024 – Present

- Engineer fine-tuning and evaluation datasets and assess advanced reasoning across LLM workflows against rigorous data-quality and benchmark criteria.

Electrical & Intelligent Systems / Electromechanical Engineer | **ALPHATEC MAROC** Mar 2024 – Aug 2025

- Supervised industrial electromechanical operations and developed smart-monitoring concepts, applying diagnostic and automation methods to improve equipment reliability and reduce avoidable downtime.

Maintenance Technician | **OCP Group** Jan 2019 – Mar 2019

- Maintained critical electromechanical assets through preventive and corrective maintenance and fast diagnostics, supporting reliable industrial operations.

SKILLS

AI Operations & Leadership: AI Data Operations Management, HITL Workflows, Data Curation, Quality Assurance, Annotation Architecture

LLM Engineering & Evaluation: LLMs, Prompt Engineering, Agentic Workflows (n8n), RAG, RLHF Evaluation, Model Alignment & Safety, Red Teaming, Chatbot Testing

Machine Learning, Vision & Data: Machine Learning, Deep Learning, Computer Vision (YOLO, Roboflow), scikit-learn, pandas, Hadoop, Apache Spark, SQL, Power BI

Audio & Multimodal AI: Speech and Audio Analysis, ASR Evaluation, Transcription Review, Multimodal Data Processing, Dataset Curation

Embedded & Edge AI: Embedded C/C++, MicroC, VHDL, Resource-Constrained IoT, Real-Time On-Device Inference, Sensor Fusion, Smart Sensors and Actuators

Industrial Automation: PLC Programming (Siemens TIA Portal), Node-RED, CAN Bus and Industrial Networks, SCADA Supervision, Digital Twin, Industrial Control, State-Space Control, Industrial Robotics, Industry 4.0

Electrical & Energy Systems: Electrical Machines, Power Electronics, Variable-Speed Drives, Electrical Installation Design, Electrical Networks and Safety, Generator Protection, Smart Grids, Renewable Energy

Industrial Intelligence: Predictive Maintenance, Anomaly Detection, Maintenance Engineering, Electromechanical Systems

CAD & Simulation: MATLAB/Simulink, CANECO, AutoCAD Electrical, CATIA, SolidWorks, 3DEXPERIENCE, Unity (Digital Twin)

Management: Project Management, Lean Management, Production Management, Entrepreneurship

Programming & Infrastructure: Python, C/C++, Java, SQL, Git/GitHub, Docker, Linux, APIs, Automation Pipelines

PROJECTS

AI PCB Component Detection & Digital Twin: Built an automated n8n workflow that detects electronic components on PCBs with a YOLO model trained and served through the Roboflow API. An LLM chatbot explains the detected circuit and suggests optimizations, and a Unity digital twin visualizes the board.

Air Anomaly Detection & Power BI Analytics (PFA Project): Developed sensor-based air monitoring with machine-learning prediction of anomalies, and built interactive Power BI dashboards to exploit the measurements and track alerts.

Quadrotor Drone Stability, Modeling & Simulation: Modeled the dynamics of a quadrotor drone and simulated its flight stability and attitude control.

Predictive Intelligent Maintenance System: Applied machine learning to industrial IoT sensor telemetry for fault prediction and anomaly detection.

Automated LLM Evaluation Pipeline: Built a benchmarking harness that scores multiple LLMs on factual accuracy and structured quality metrics, with adversarial test sets and CI regression checks.

Agentic Business Automation System: Designed an LLM-powered agent architecture that runs end-to-end business processes through multi-step API workflows.

Developer Portfolio: Published a CI/CD-enabled engineering portfolio showcasing AI, automation, embedded and intelligent-systems work, including a library of 95 prompts across 19 domains.
